QBCC ACT LICENCE NO. 1052589

Domestic Shadesails

Shadesails are the ideal option for economical, quality shade to any area such as swimming pools, eating areas/outdoor entertainment areas, carports, schools, children's playgrounds and hotels/restaurant dining areas. Shadesails and covers are available in both commercial grade shade cloth and reinforced structural vinyl in a wide variety of colours and styles.

We offer a free measure & quote service, as well as advice on what design may best suit your requirements.

We are holders of a QBCC (Queensland Building Construction Commission) "Builder restricted to Special Structures (Shadesails)" License, **QBCC Licence No 1052589**. This license is the minimum legal requirement to install shadesails within Queensland.

We strongly recommend that you obtain Council Approval for your new shadesail before works commence, to ensure compliance with Local Government law.

Unfortunately, due to changes in the Council Approval process, we no longer offer the complete shadesail package including all of the necessary steelwork and approvals, however we do have the contact details for several local steel fabricators & installers / builders who can offer this service. Please ask our sales staff if you would like more information.

All the fixing points on our shadesails are reinforced with heavy duty, UV-resistant vinyl in a colour similar to the shade cloth chosen. All of our sails are supplied with marine grade 316 stainless steel turnbuckles and fittings for easy removal before the onset of cyclone rated winds - which can be a common problem in North Queensland. Turnbuckles also allow for ease of tensioning and adjustment of the sails. All centre seams are heat welded using hot wedge welders, as this provides a stronger seam than stitching. The PTFE (Teflon) thread we use for stitching the outside hems carries a 15 year pro-rata warranty against UV degradation.

All fabrication and installation work on our shadesails is carried out by our own qualified tradesmen and all fabrication work is carried out in-house at our Townsville workshop.

All of the edges on our shadesails are scalloped (cut inwards on a catenary curve) up to 7% in order to achieve even tension over the sail area. Our sails are manufactured with either stainless steel cable edges or UV stabilised 50mm load rated polyester A7030 webbing edges. For the larger sails we do recommend the stainless steel cable edging as it will not stretch and therefore requires less re-tensioning over time.

Upon completion of your project, we provide you with our Care & Maintenance Manual for your shade sail. This manual contains easy to follow instructions for maintaining & cleaning your sail as well as the safe removal and reinstallation of your shade sail. It also contains all the necessary warranty documents.

We are stockists of “Monotec 370” series shade cloth. This is an Australian made, premium range of commercial grade shade cloth which offers 90% shade factor plus the strength and durability to ensure maintenance-free long life performance. Manufactured in Brisbane QLD, “Monotec 370” carries a full 15 year pro-rata warranty against UV degradation which includes a ‘Remove and Replace’ policy. “Monotec 370” is also fire rated for extra peace of mind. The round HDPE yarn construction allows it to “self-clean” and is mould and mildew resistant. It is also available in a full range of appealing colours including the bright and funky *Designers Collection*

Please Note:
Shade cloth colours shown in this brochure may differ to the colour of the actual material.

We also stock Synthesis “Commercial 95” series shade cloth by Gale. This range of commercial grade shade cloth offers maximum sun protection with a proven 95% shade factor. “Commercial 95” is also backed with a full 10 year pro-rata warranty but does not include the remove and replace policy. Also available in a wide range of appealing colours.

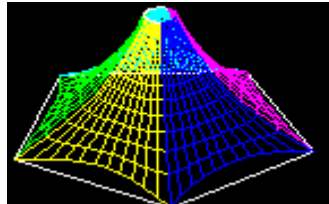

Vinyl Tension Membranes

OUTDOOR EATING AREA AT
WATERMARK RESTAURANT

We also manufacture & install vinyl sails and structures using specialised quality reinforced tensioned membrane material. We utilise the latest computer modelling software and computer aided plotter cutter to produce architectural vinyl membranes that achieve even tension over structures and between attachment points.

Commercial Projects

Beehive Vinyl Products take as much care, attention and pride in our commercial shadesail projects as we do with our many domestic shadesails. We have carried out many commercial shade projects for large corporations such as BHP, QLD Nickel, Korea Zinc, Stockland Group, QBuild, Ergon Energy, Willows Shoppingtown (Dexus), Department of Defence, Spotless, Glencore, JCU as well as many local councils & schools within North & Western QLD.

UMBRELLAS

We are stockists & installers of Vogue Umbrella's.

Vogue Umbrellas are made in North Queensland and are a stylish alternative to a shade sail whilst still offering the same UV protection. Vogue Umbrellas are a robustly constructed umbrella and come in either centre pole or cantilever designs. Vogue Umbrellas are rotatable 360 degrees, have a unique flush footing design and are available in a variety of colours and sizes.

Being able to rotate the umbrella 360 degrees allows you to cast shade to different areas and allow for the path of the sun at different times of the day.

Vogue Umbrellas are engineered by certified Registered Engineers unlike lighter aluminium umbrellas. Engineering of the umbrella footings & fittings is site specific, as wind ratings can differ depending on your location. A copy of the Engineer's certification along with drawings will be provided either for installation by yourself or upon completion of work.

Umbrella's are ideal if you have limited space for only one post as opposed to having a number of posts for a shade sail structure.

Beehive Vinyl Products was formed in 1978 over 36 years ago and was one of the first Townsville companies to use the new welding technique of high frequency vinyl welding. This method eliminated the need for stitching and resulted in a more superior PVC vinyl products that are completely water proof, stronger and have a longer life expectancy.

We pride ourselves on our ability to produce any vinyl, canvas or shade cloth item, including our very popular vinyl tool bags, widely used throughout the mining, construction and electrical industry, Australia wide.

Our company carries out work for local council's, State & Federal Governments, large corporate customers, construction, mining, infrastructure, Defence department, Heavy industry as well as our valuable domestic customers. We also support and work closely with many local contractors & other customers, with the manufacture of vinyl and shade cloth sails, covers & shade structures, throughout Townsville, the surrounding areas including Western QLD.

Our other capabilities include Motor & Marine trimming, and fabricating a diverse range of products such as truck tarps & curtains, caravan annexes, camper trailers, swags, industrial tarpaulins, industrial curtains, marquees, banners, sporting & safety pads & products, gear bags, tool bags, machinery & equipment covers, dam & pond liners, commercial upholstery, specialised textile products like floatation booms for the stinger nets and many other applications.

It is our aim of Beehive Vinyl Products P/L to construct and repair products to the highest quality standard whilst complying & meeting the customers requirements. The management and staff of Beehive Vinyl Products P/L are fully committed to the successful implementation and maintenance of a Quality Systems & Safety systems designed to satisfy and be compliant to International Standard ISO 9001. Australian Standard AS3902.

Beehive Vinyl Products P/L has many years experience in the industry and we pride ourselves on quality products through innovative design and manufacture.
